

# Energy Policy

## Declaration of Commitment

As part of its environmental strategy, Moto Hospitality Ltd is committed to responsible energy management and practises energy efficiency throughout all its premises, plant and equipment, wherever it is cost-effective to do so.

## Policy

- to avoid unnecessary expenditure
- to improve cost-effectiveness, productivity and working conditions
- to protect the environment
- to comply with relevant legislation

## Objectives

- to buy fuels at the most economic cost
- to burn and use them as efficiently as is practicable
- to reduce the amount of pollution, particularly CO2 emissions, caused by energy consumption.
- to reduce, wherever possible, dependence on fossil fuels through the use of passive conservation measures by enhancing use of daylight and natural ventilation.
- to investigate fully all renewable sources of energy and adapt those technologies where it is commercially and logistically feasible to do so.

## Immediate Aims

- to continue the energy consumption reduction programme which has been sponsored and supported by the board of directors
- to make this energy consumption reduction programme a company wide initiative by increasing energy awareness at all our sites
- to invest in a rolling programme of energy saving measures which will maximise returns on investment in order to generate funds which can be re-invested, at least in part, in further energy management activities
- to ensure all new build projects incorporate energy saving technology in their design.
- to safeguard these gains by establishing and maintaining a management information system designed to ensure that information is delivered to those who need it, to support their managerial decision making.
